Accelerating Medical Innovation: The Sublime Laser Opportunity

An ISO 13485-Certified Platform for Next-Generation MedTech Manufacturing.

Confidential Information
Strategy Brief | 2024

Demonstration only

Investment Highlights: Acquiring a Time-to-Market Accelerator

Demonstration only

2-5 Days

Turnaround for complex prototypes vs. Industry Standard of 4-8 weeks.

12 Microns

Minimum feature size via Femtosecond (Cold Ablation) & Fiber Laser platforms

ISO 13485

Fully certified Quality Management System. Zero regulatory ramp-up time.

$1.2B Market

Immediate entry into the high-growth micromachining sector (9% CAGR).

MedTech Trends Are Outpacing Legacy Supply Chains

Demonstration only

Extreme Miniaturization

Neurovascular and Cardiovascular therapies require **<20µm** features impossible for traditional machining.

Material Complexity

Rise of Nitinol requires “cold” cutting to preserve super-elasticity and shape memory.

The Velocity Imperative

Accelerated New Product Introduction (NPI) cycles demand rapid iteration. Waiting weeks for prototypes is no longer viable.

The Supply Chain Bottleneck Stalling R&D

Demonstration only

Tier-1 CMOs

Resonetics

Integer

- **High Capacity**
- 4-8 week lead times. Focus on volume, not agility.

Sublime Laser Opportunity

The Innovation Gap:
OEMs are stuck waiting or risking compliance.

Job Shops

Local Generalists

- **Fast / Cheap**
- Lack ISO 13485. No specific MedTech expertise. Quality risks.

Sublime Laser Bridges the Gap Between Concept and Component

Demonstration only

Validating R&D concepts faster accelerates **Time-to-Revenue.**

Validated Technology: The Femtosecond Advantage

Demonstration only

Standard Laser:
Thermal Damage Risk (HAZ)

Sublime Femtosecond:
Cold Ablation

Pulse Duration:
10^-15 seconds
(Material vaporizes before heat diffuses).

Feature Size:
Down to **12 microns**.

Benefit:
Preserves Nitinol's super-elasticity. Critical for stents and heart valves.

Dual-Platform Strategy Optimizes Precision and Cost

Demonstration only

Femtosecond
(The Scalpel)

Best for: Nitinol, Bio-absorbables, Zero HAZ requirements.

Beam Kerf 12-30 microns.
Wall thickness down to 0.0005”.

Fiber Laser
(The Workhorse)

Best for: Stainless Steel, high-speed cutting, thicker walls.

Beam Kerf 20-40 microns.
OD range up to 0.500”.

We match the right cost structure to the right part geometry.

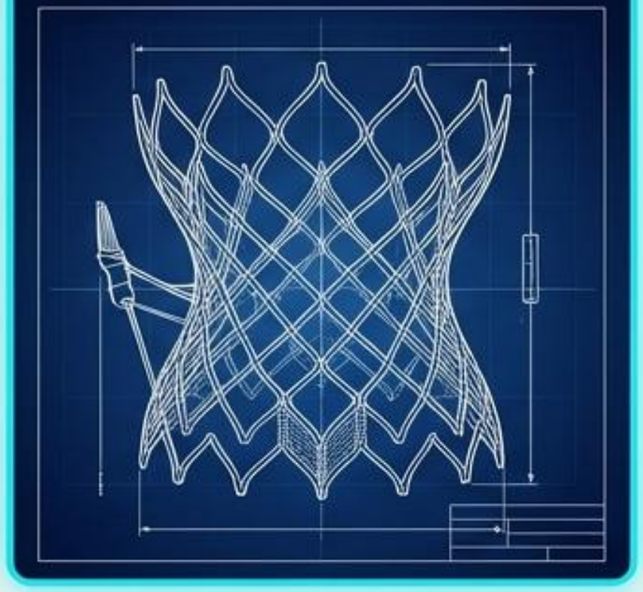
Critical Components for High-Growth Therapies

Demonstration only

Neurovascular

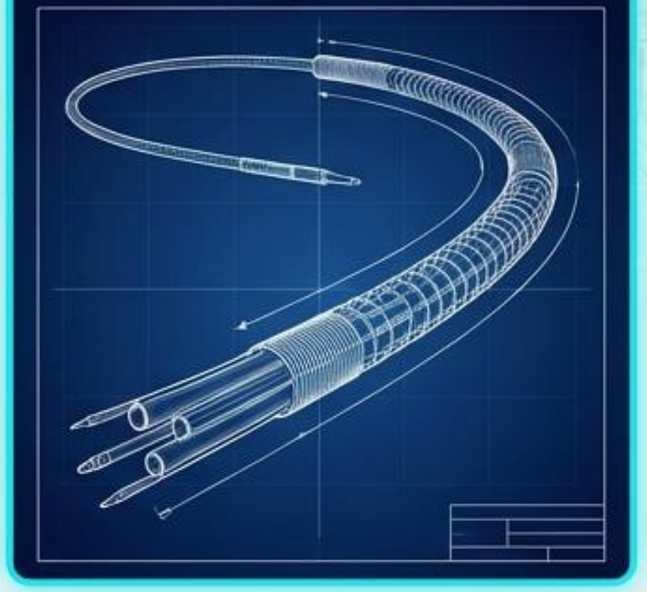
Aneurysm coils,
Flow-diverters,
Micro-catheters.

Cardiovascular



Stents, Heart Valve frames,
Guidewire reinforcements.

Peripheral



Support structures for long-length stents.

Specialized mastery of Nitinol, Stainless Steel, Ceramics, and Glass.

Applied AI Labs

Revenue Models Embedded in the R&D Lifecycle

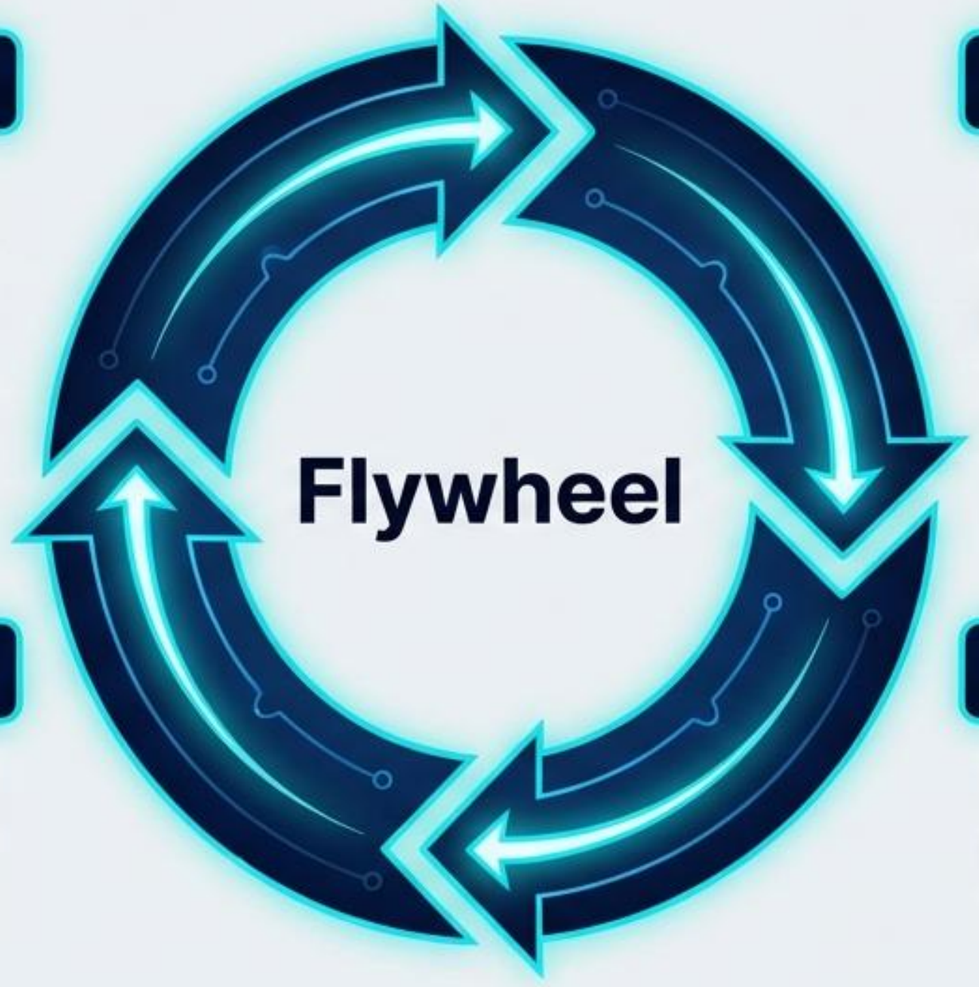
Demonstration only

R&D Prototyping

The entry point. High-precision, low volume (1-50 parts). Delivered in days.

Rent-a-Laser

Strategic Differentiator. Client engineers work on-site for real-time iteration. Collapses weeks of R&D into hours.



Production

ISO 13485 certified manufacturing for pilot and mid-volume runs.

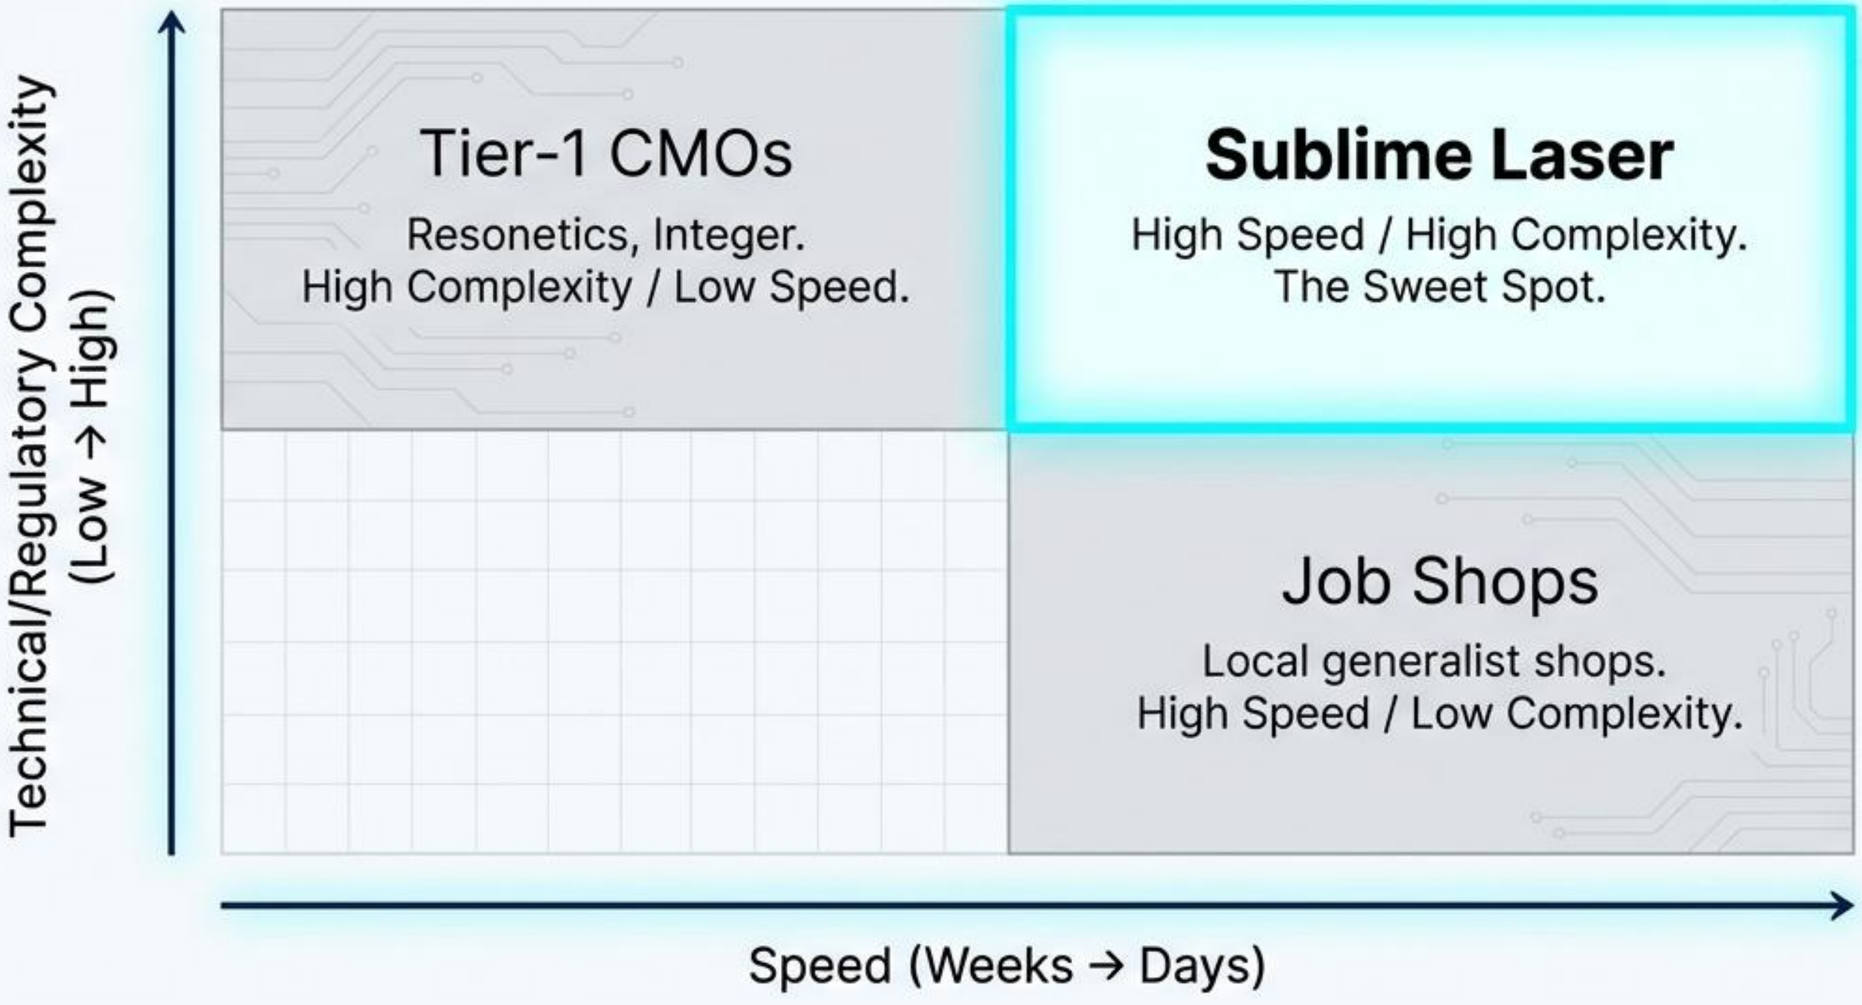
Design Services

DFM optimization for fatigue performance and manufacturability.

Accelerating the path from concept to commercial launch with integrated R&D solutions.

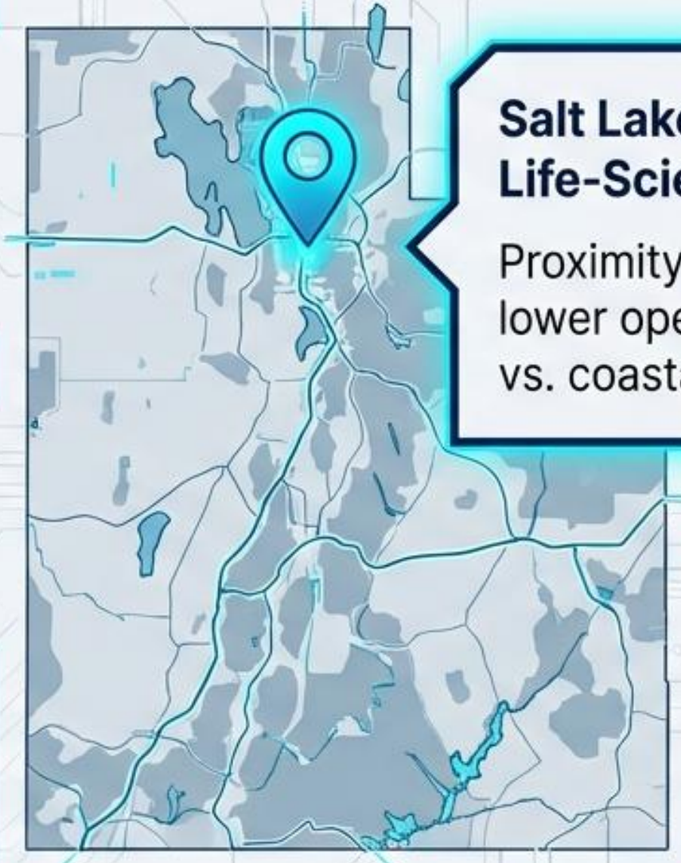
Dominating a Defensible Niche

Demonstration only



Operational Excellence in the BioHive

Demonstration only



Salt Lake City Life-Sciences Hub

Proximity to OEMs, lower operating costs vs. coastal centers.

Quality System

ISO 13485 Certified. Audited QMS removes 12-18 month barrier to entry for acquirers.

Key Personnel

- Todd Turnlund (CEO): 20+ years laser physics experience.
- Dave Ewell (Principal Engineer): DFM & parameter tuning expert.
- Sevala Uvejovic: Production & Compliance lead.

Strategic Acquisition Synergies

Demonstration only

Vertical Integration

Internalize critical Nitinol machining costs. Protect proprietary IP by keeping R&D in-house.

Revenue Growth

Cross-sell ‘Rapid Prototyping’ to the acquirer’s global client list. Capture value earlier in the lifecycle.

Pipeline Visibility

“Rent-a-Laser” provides early visibility into the next generation of blockbuster devices before high-volume production begins.

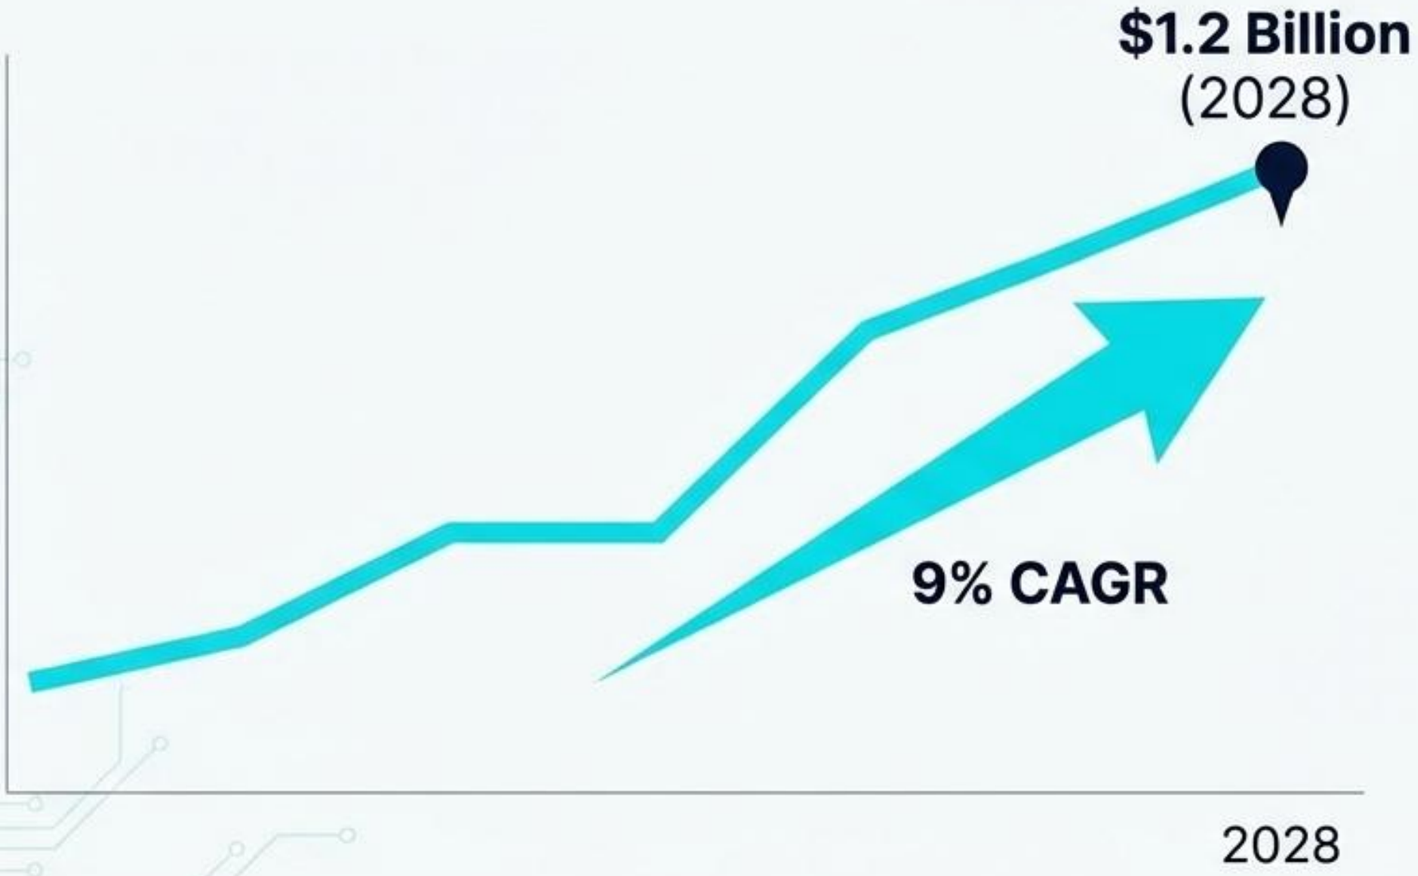
Risk Assessment & Mitigation

Demonstration only

Risk Factor	Mitigation Strategy
Key Person Risk	Retention packages and structured earn-outs for founding leadership to ensure knowledge transfer.
Capacity Constraints	Asset-light model. Modest CAPEX required to scale with additional shifts or stations.
Technological Shift	Dual-platform (Femto + Fiber) hedges against changes in preferred machining modalities.

Positioned to Capture Share in a Growing Market

Demonstration only



Growth Drivers

- Onshoring trends (De-risking supply chains).
- Increasing demand for minimally invasive neuro/cardio devices.
- Nitinol adoption surge.

A Turnkey Platform Ready for Scale

Demonstration only

Sublime Laser offers an immediate competitive moat through speed, precision, and compliance.

1. **Execute NDA:** Access full financial/operational due diligence.
2. **Site Visit:** See the ‘Cold Ablation’ difference live in Salt Lake City.
3. **Customer Reference Calls:** Validate the ‘days-not-weeks’ turnaround with Tier-1 OEMs.
